

Report
Of
Civic Safe

Smart Civic Complaint & Public Safety Management System

Submitted To:
School of Computer Science and Engineering
IILM University, Greater Noida, U.P.

In partial fulfilment of the requirement of degree of
Bachelor's of Technology in Computer Science and Engineering

Submitted By:
Roll Number: 25SCS1003001386
Name of Student: VINAYAK SINGH
Batch: 2026-27

2026-27

CANDIDATE'S DECLARATION

I, Vinayak Singh do hereby declare that the internship report titled “Civic Safe” has been completed by me to fulfil the requirement for the award of the degree of Bachelor of Technology in CSE. All the references have been quoted and I have not taken as such any material from any other source. I affirm to you that this report is my own and has not been submitted to any other institute for any degree/diploma requirement and further I shall be solely responsible for any kind of copyright violation in this regard.

Signature:

Student Name: Vinayak Singh

Roll no: 25SCS1003001386

ACKNOWLEDGEMENT

I am using this opportunity to express my gratitude to everyone who supported me throughout the Internship Program. I am thankful for their aspiring guidance, invaluable constructive criticism and friendly advice during this work. I am sincerely grateful to them for sharing truthful and illuminating views on a number of issues related to this work.

I express my gratitude to my parents for their blessings.

Signature:

Student Name: Vinayak Singh

Roll no: 25SCS1003001386

3. INTERNSHIP COMPLETION CERTIFICATE

The following certificate, issued by MARS – Centre for Sustainable Community Development, confirms the successful completion of the internship during which this project was carried out.

CERTIFICATE OF INTERNSHIP COMPLETION

Reference No.: MARS/INT-CERT/2026/041

Date of Issue: July 31, 2026

This is to certify that

Vinayak Singh

has successfully completed an internship with MARS – Centre for Sustainable Community Development from June 1, 2026 to July 15, 2026, contributing sincerely to the organisation's initiatives in sustainable community development. During this period, the intern demonstrated dedication, a strong learning attitude, and a genuine commitment to the values of sustainability and community service.

Sustainability is not a destination but a continuing journey. May the knowledge and experience gained during this internship inspire you to keep championing sustainable practices, and to carry this commitment forward into every community and career you touch in the years ahead.

Dr. Manish Prateek

Director

MARS – Centre for Sustainable
Community Development

4. PROJECT DESCRIPTION

4.1 Introduction

Civic issues such as uncollected garbage, plastic dumping, waste accumulation, water pollution, and public-safety hazards are a daily reality in most Indian towns and cities. Citizens who notice these issues frequently have no simple way to report them: complaints are made by phone calls, in-person visits to municipal offices, or scattered social-media posts, none of which capture the exact location, arrive at the right department, or give the complainant any visibility into what happens next.

CivicSafe is a full-stack mobile platform designed to close this gap. It gives citizens a single app to photograph an issue, auto-tag its GPS location, classify it into a category, and submit it directly to the responsible authority, while giving government administrators a live map, a prioritised queue, and an audit trail from first report to final resolution.

4.2 Organization Profile

This project was carried out during an internship with MARS – Centre for Sustainable Community Development, an organisation working on sustainable community development initiatives. The internship, from June 1, 2026 to July 15, 2026, provided guidance, mentorship, and the environment needed to design and build CivicSafe as a project with genuine civic and social relevance.

4.3 Problem Statement

Municipal and civic complaint handling in most cities suffers from five recurring problems:

- Citizens do not know where or how to report a civic issue.
- Manual complaint processes (calls, paper forms, in-person visits) are slow and tedious.
- Complaints lack precise location data, making field verification difficult.
- Authorities cannot prioritise issues they cannot see on a map or dashboard.
- There is little to no transparency for the citizen after a complaint is filed.

4.4 Project Objectives

- Provide citizens with a simple mobile flow to capture a photo, auto-attach GPS coordinates and a timestamp, and submit an incident report in under a minute.
- Automatically route every submitted report to the correct government department based on its category.
- Give administrators a live incident map, a prioritised report queue, and an analytics dashboard to monitor citywide trends.
- Maintain a full status-history timeline for every report, from Submitted through Under Review, Assigned, Action Started, to Resolved.
- Support one-tap emergency dialling for time-critical safety situations.
- Explore AI-assisted image classification to auto-suggest an issue category and flag invalid submissions.

4.5 Scope of the Project

The current build of CivicSafe covers citizen-side incident reporting across six categories (Garbage Dump, Plastic Pollution, Waste Accumulation, Water Pollution, Suspicious Object, and Emergency Situation), citizen report tracking, and an administrator/authority portal with a live map, report management, resolution upload, and analytics. The project targets municipal corporations, smart-city bodies, pollution-control boards, disaster-management cells, police departments, and university campuses as prospective deployment environments.

4.6 Technologies and Tools Used

- **Mobile app:** React Native, Expo, TypeScript - The mobile client is built with React Native and the Expo tooling layer, written entirely in TypeScript (.tsx). Expo provides simplified access to native camera and location APIs and streamlines builds across Android and iOS.
- **Backend:** Node.js, Express.js, TypeScript - The backend REST API runs on Node.js with the Express.js framework, written in TypeScript for type safety across controllers, services, and models.
- **Database:** MongoDB with Mongoose ODM - MongoDB is the primary data store, accessed through Mongoose schemas that enforce structure on Users, Reports, Status History, Feedback, and OTP documents.

- **Authentication:** JWT and Firebase Admin SDK - Firebase Admin SDK integration supports identity verification alongside the platform's own JWT-based session tokens and role-based middleware.
- **Media storage:** Cloudinary - handles image upload, storage, and delivery for both incident photos and resolution-proof photos.
- **AI services:** Google Gemini API - The Gemini API powers the AI-assisted detection service, which estimates an issue category/priority and validates that a submitted image plausibly shows a real civic issue.
- **State management & networking:** React Navigation, Zustand, Axios - React Navigation manages separate stacks for Auth, Citizen, and Admin flows. Zustand provides lightweight global state for authentication and settings. A centralised Axios-based API service layer handles all network requests.
- **Version control:** Git - Expo Camera and Expo Location provide the live photo capture and GPS tagging that anchor CivicSafe's evidence-based reporting model.

4.7 System Architecture

CivicSafe follows a three-tier architecture: a React Native mobile client, an Express.js REST API backend, and a MongoDB data store, supported by external cloud services for authentication, media storage, and AI inference. The platform is organised into eight functional modules shared across the citizen and admin experiences — Authentication & Onboarding, Incident Reporting, AI Detection & Validation, Report Tracking, Admin Dashboard & Analytics, Live Map, Report Management & Resolution, and Notification & Feedback.

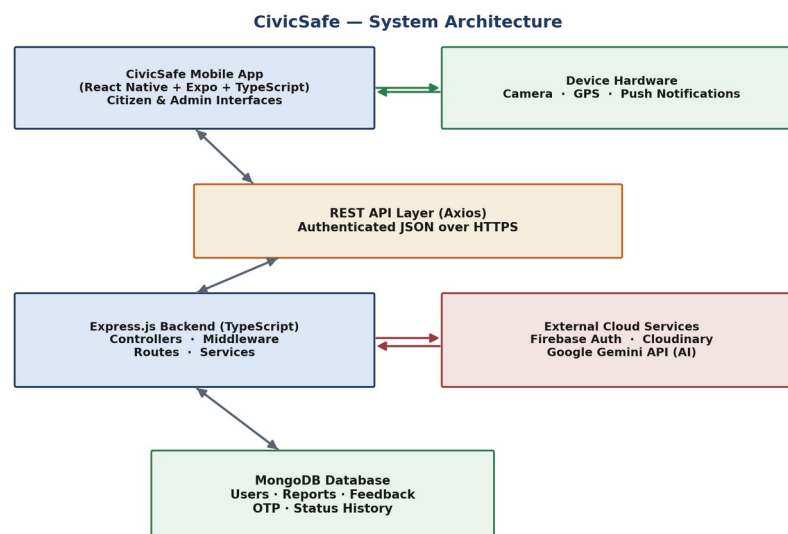

Figure 4.1 — CivicSafe system architecture

4.8 Methodology

- **Step 1 — Requirement Gathering & Data Modelling**

The team identified the six incident categories, the citizen and admin roles, and the report status lifecycle, then modelled these as Mongoose schemas (User, Report, StatusHistory, Feedback, OTP).

- **Step 2 — UI/UX Design**

Screens were designed around a minimal, guided flow: onboarding → authentication → home → category → camera → description → review → submit, mirroring the six user-facing taps behind the thirteen backend steps.

- **Step 3 — Backend Development**

The Express.js API was built module by module: configuration (env, db, Firebase, Cloudinary), middleware (auth, role, error handling, upload), controllers (auth, report, admin, feedback), services (routing, AI, notification, email, image upload), and routes.

- **Step 4 — Frontend Development**

The React Native app was built screen by screen across Auth, Citizen (Dashboard, Report, Tracking, Profile), and Admin (Dashboard, Map, Reports, Resolution, Analytics) navigation stacks, backed by a shared API service layer and Zustand stores.

- **Step 5 — Integration & Testing**

Frontend screens were wired to backend endpoints through the Axios API layer, with functional, integration, database, UI/UX, performance, security, usability, stress, and regression testing performed across both codebases (see Chapter 8).

- **Step 6 — Deployment & Demonstration**

The backend was containerised/deployed to a cloud runtime with a managed MongoDB instance, and the mobile app was built and demonstrated via Expo, with the walkthrough video and presentation deck used for the final evaluation.

4.9 Expected Outcomes

- A working mobile application (React Native / Expo) usable by citizens on Android and iOS.

- A working REST API backend (Node.js / Express / TypeScript) with a MongoDB data store.
- An administrator experience covering live mapping, report triage, and resolution workflows.
- A prototype AI-assisted detection layer that can be moved to a production backend model in a future iteration.

4.10 Certificates of Completion and Other Communication Mail Proof

The Internship Completion Certificate issued by MARS – Centre for Sustainable Community Development is attached in Section 3 of this report (Internship Completion Certificate), certifying successful completion of the internship from June 1, 2026 to July 15, 2026, during which this project was undertaken.

MARS

Center For Sustainable Community Development

Date: 30/05/2026

Subject: Offer Letter – MARS Centre for Sustainable Community Development Internship (01 June 2026 to 15 July 2026)

Dear Vinayak Singh,

We are pleased to welcome you to the MARS – Centre for Sustainable Community Development Internship Programme scheduled from 1st June 2026 to 15th July 2026. Your enrollment reflects your interest in creating meaningful impact through technology-driven sustainable development initiatives, and we are delighted to have you join this learning journey.

MARS – Centre for Sustainable Community Development is a Section 8 Company (Non-Government Organization) focused on creating technological solutions for sustainable development. One of the core missions of MARS is wildlife conservation, leveraging technology to protect and preserve biodiversity. The organization employs a range of innovative technological strategies including web development, mobile application development, extended reality (XR), new tools and techniques, and IoT devices to address real-world sustainability challenges.

At the beginning of the internship, you will receive training to help you understand the problem domains, field requirements, and the process of developing technology-based interventions. During the internship, you are required to maintain a daily diary of your work and observations, supported by geo-tagged photographs documenting your activities and field engagement.

The key problem statements for this internship include: (i) Life Below Water – developing solutions that support aquatic ecosystem conservation and monitoring; (ii) Life on Land – protecting biodiversity, forests, wildlife, and natural habitats; (iii) Sustainable Agriculture – improving agricultural productivity while conserving resources; and (iv) Eradication of Poverty through Technology – creating innovative technological interventions that improve livelihoods, accessibility, and socio-economic opportunities.

You will be expected to create computational and technology-enabled solutions for the challenges explained to you by domain experts. All projects will be undertaken under the guidance and mentorship of experts, enabling you to translate ideas into practical and scalable solutions.

The world urgently needs young innovators who can combine technology with sustainability to solve complex environmental and social challenges. Your contribution can help build resilient communities and create a more sustainable future for generations to come.

We look forward to your participation and wish you a productive and rewarding internship experience.

Yours sincerely,

Mrs. Priti Sinha (Director)

Dear Intern(s),

Congratulations on successfully completing your internship with **MARS – Centre for Sustainable Community Development!**

We sincerely appreciate your dedication, enthusiasm, and the valuable contributions you made during your internship. Your willingness to apply your computational skills to address real-world social challenges reflects the spirit of innovation and service that MARS strives to promote.

As you move forward in your academic and professional journey, we encourage you to continue using your knowledge and technical expertise to create meaningful solutions for society. Technology has the power to transform lives when guided by compassion, responsibility, and a commitment to sustainable development. We hope this internship has inspired you to become not only skilled professionals but also socially conscious changemakers.

Please find your **Internship Completion Certificate** attached to this email. We congratulate you once again on this achievement and wish you continued success in all your future endeavors.

Thank you for being a part of the MARS family. We look forward to seeing the positive impact you will create in the years ahead.

With best wishes,

Team MARS

MARS – Centre for Sustainable Community Development
